Summary

- 7th-semester Computer Systems Engineering student with hands-on experience in software development, artificial intelligence, automation, backend development, and Linux infrastructure. I have designed, developed, deployed, and maintained web applications, business bots, multi-agent systems, automation platforms, and distributed services. Experienced in managing self-hosted infrastructure and securely exposing services using Linux, Docker, DNS, reverse proxies, and Cloudflare Tunnel.

EDUCATION

- **B.S. in Computer Systems Engineering** (In progress)
Universidad Autónoma de Aguascalientes
7th semester

SKILLS

- **Languages**
Python, TypeScript, JavaScript, C++, Java, SQL
- **Backend & APIs**
FastAPI, Node.js, Express, REST APIs, WebSocket, SQLAlchemy, Prisma, Pydantic
- **Frontend**
React, Next.js, Tailwind CSS
- **Artificial Intelligence**
LLMs, RAG, embeddings, multi-agent systems, OpenAI API, LiteLLM, NLP, computer vision
- **Databases**
PostgreSQL, MySQL, SQLite, SQLAlchemy, Prisma, Alembic
- **Infrastructure & DevOps**
Linux, Docker, Docker Compose, Kubernetes, Nginx, PM2, Cloudflare Tunnel, DNS, reverse proxies, SSH, firewalls
- **Observability & Performance**
OpenTelemetry, Prometheus, Grafana, Jaeger, k6, resilience testing, chaos engineering
- **Security & Authentication**
WebAuthn, Passkeys, JWT, bcrypt, AES
- **Automation & Tools**
Git, GitHub, GitHub Actions, CI/CD, AppSheet, RPA
- **Messaging & Services**
Telegram Bot API, WhatsApp Cloud API, Redis

PROJECTS

- **A.R.G.O.S. — Multi-Agent AI Personal Assistant**

Personal AI system inspired by AI-style assistants: multi-agent architecture, multi-provider LLM router with fall-back, custom long-term memory via RAG and embeddings, WebSocket communication with remote services.

Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, LiteLLM, RAG, Telegram Bot API, Next.js, React, Docker.

- **INVITACIONES — Event Management Platform**

Full-stack platform automating invitations via WhatsApp, confirmations, unique QR passes, and duplicate-prevention access control. Deployed in production; used for an event with 500 attendees.

React, Node.js, Express, Baileys, Python, FastAPI, Pillow, JWT, SQLite, AES, PM2, Cloudflare Tunnel.

- **CHATBOTNAUTA — AI-Powered Business Chatbot**

Automated customer service system for a printing business: interprets requests via LLMs, generates quotations automatically, includes an operator dashboard with human handoff, integrates WhatsApp Cloud API.

Node.js, TypeScript, Express, Prisma, OpenAI Structured Outputs, WhatsApp Cloud API, Jest.

- **BOVEDA — Personal Finance Platform**

Personal web app for financial management: accounts, budgets, loans, credit cards, statistics. Authentication via WebAuthn/Passkeys, deployed with Docker and Nginx behind Cloudflare Tunnel.

Next.js, React, TypeScript, Prisma, PostgreSQL, Zod, WebAuthn/Passkeys, Docker, Nginx.

- **RESILENCIA_KUBERNETES — Microservices Platform**

Collaborative academic project on resilience, observability, and microservices: circuit breakers, retry mechanisms, chaos engineering tests, full observability stack.

Python, FastAPI, PostgreSQL, OpenTelemetry, Prometheus, Grafana, Jaeger, Docker, Kubernetes, k6.

- **GENERADOR-CV / DevProfile — Resume Generation Platform**

Collaborative project for creating professional profiles and resumes, developed with feature branches, pull requests, and CI/CD via GitHub Actions.

Git, GitHub, GitHub Actions, CI/CD.

EXPERIENCE

- **Universidad Autónoma de Aguascalientes**

JAN '26 – Present

Developer / Researcher — Social Service Program

Developing a distributed systems simulation environment to study performance impact vs. real-world implementations. Working with Docker and Kubernetes for service execution; developed a control interface for process execution, resilience, and chaos engineering testing.

- **Chavonauta**

SEP '25 – Present

Assistant Manager — Software Development / Infrastructure / Technical Support

Designed and implemented a dedicated Linux server to centralize business services. Managing services with Docker, Docker Compose, SSH, DNS, reverse proxies, and Cloudflare Tunnel. Developing internal applications with AppSheet, including equipment intake/tracking and PrintOnauta.

- **La Chilaquileria**

JAN '24 – JAN '25 (12 M)

Sous Chef

Progressed from dishwasher to Sous Chef. Coordinated kitchen activities, supported team supervision, and organized work under pressure.
